

Securitex Auto Dialer system

The Securitex Power Trip auto-dialer system comes with 1, 2 or 3 built-in 230VAC 2 poles relay that will switch state when the equipment like the electrical appliance or even Koi pond fish pump trip due to power outage. The system is design to detect all electrical equipment stop and in turn trigger the auto-dialer unit to call the 1 or 2 pre-programmed phone number to inform the key-holder of the power outage. We have also incorporated 3 units of relay bypass switch just incase any of the 3 monitoring equipment need to put out of service for a long time. A TEST switch is also built-into the auto-dialer unit so that operator can test the system periodically. The specially fabricated UPS ensure that the system continue to function even in a power outage for up to.

The system has 3 positions ON/OFF power switch (ON/OFF switch on the side of the auto dialer unit)

- (1) Position "1" (middle part): Calling the programmed number without siren.
- (2) Position "2" (upper part): Siren sounds approximately 30 seconds after the first calling.
- (3) Position "3" (lower part): Turn of the dialer and for program of phone number.

How to input the phone number or pager number

- a. Input the number at the power switch OFF
- b. It calls up to 2 different contact numbers. Enter first number in "Key A" and the second number in "Key C"
- c. It sounds for entering keys
- d. Informing through telephone, enter the area code for inputting different area phone number.
- e. Informing through pager, enter the number in the "Key A and B"

When to use the Reset Key?

1. Re-entering the phone number
2. Not able to enter phone numbers on the keypad
3. Cannot function.

How to enter Numbers?

- a. Input the mobile phone number into Key "A"
Press the memory button (M)
Enter the mobile number (example: 91234567)
Press the Key "A" to confirmed.
- b. Input the telephone phone number into Key "C"
Press the memory button (M)
Enter the mobile number (example: 61234567)
Press the Key "C" to confirmed.

Informing through Pager and mobile phone.

- a. Input the pager number into Key "A"
Press the memory button (M)
Enter the mobile number (example: 92059803)
Press the Key "A" to confirmed.

For numeric paging, please input the pager number into "A" and then, input service code with numeric message into the key "B" with the same procedure.

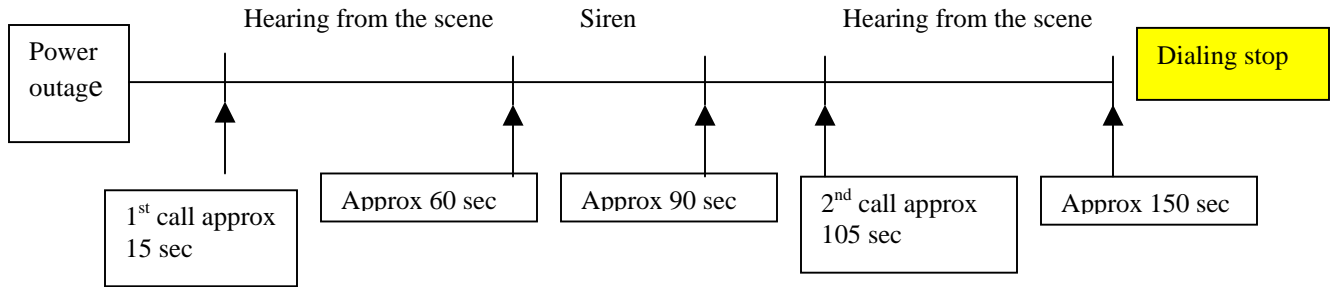

- b. Input the mobile phone number into Key "C"
Press the memory button (M)
Enter the mobile number (example: 91234567)
Press the Key "C" to confirmed.

Note:

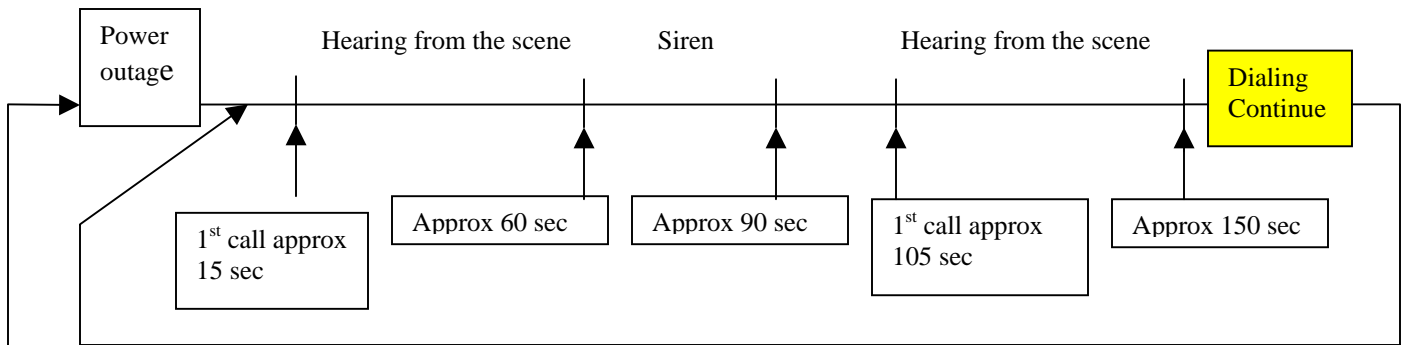

The above system is design in such a way that once the auto-dialer is trigger due to trip or lost of power, the auto dialer will continue to dial the pre-programmed phone number in sequent non-stop unit the system is reset. This feature is only applicable if only 1 phone number is programmed into the system.

If the dialer is programmed with 2 phones number than the system will dial- 1st number and than followed by 2nd number in sequent. However the auto dialer dial non-stop function will not activate.

2 phone number preprogrammed.

1 phone number preprogrammed.

This sequent will continue until the trip condition is rectified or the unit is reset.

The above show the process & time when the system first detect the tripped

Auto dialer unit
