

# Intermix Open Voice Intercom System 95 Series

*for Both Commercial and Home Use*

Featuring a standardized elegant design, the 95 Series includes three master stations and seven different sub stations, which can be used together (intermix type) in either desktop, surface- or flush-mount applications.

The master stations (3call, 6call and 10 call) can be answered hands free like all sub stations when other master stations call.

The LED call lamps clearly indicate calls from sub stations even when you are engaged.

10-Call Master Station 9510F (desktop use)

## *Flexible configuration to match your individual requirements*

### **Paging and Door Release**

For commercial and industrial applications, the 95-Series can be connected to existing P.A. amplifiers, enabling paging through P.A. speakers. You may substitute horn speakers for sub stations if you need more power. Also, the 6call and 10-call master stations come standard with a door release button so that you can unlock the door from inside your room. (When optional electric door strike is installed)

### **Home Communication and Security**

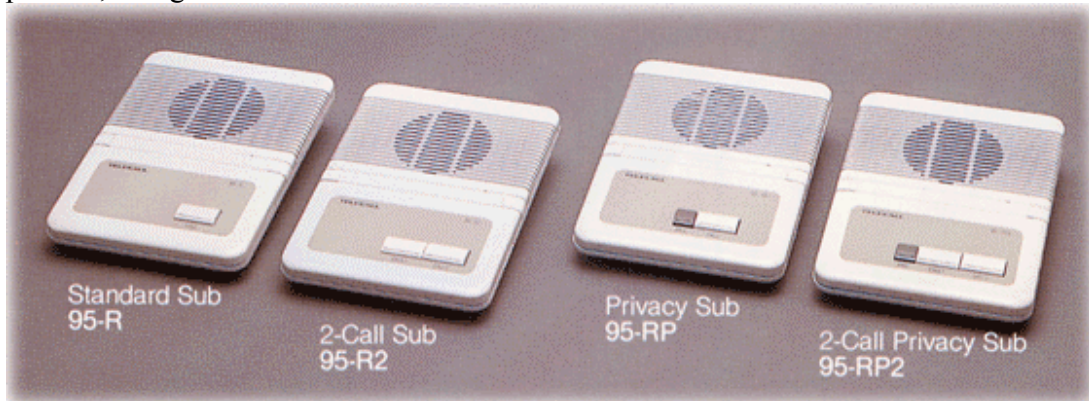

The durable 95-Series is made to withstand the rigors of everyday business use, yet its elegant design is equally suited for home installation. From answering and opening the door, to monitoring the baby's room, the 95 Series is active 24 hours a day. Wherever you are in your house, pressing a button puts you in instant communication.

## 7 Different Sub Stations

### Indoor Sub Stations

95 Series offers four indoor sub stations to meet your exact needs.

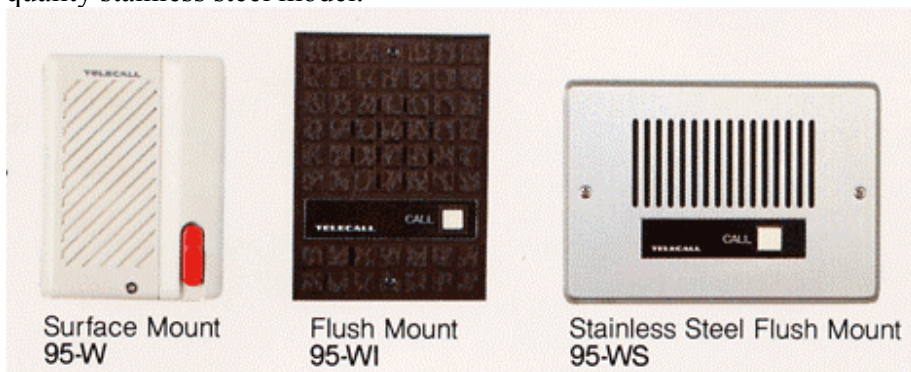

The privacy sub station means masters cannot monitor when its privacy button is pressed, though the sub can hear the master station's call.

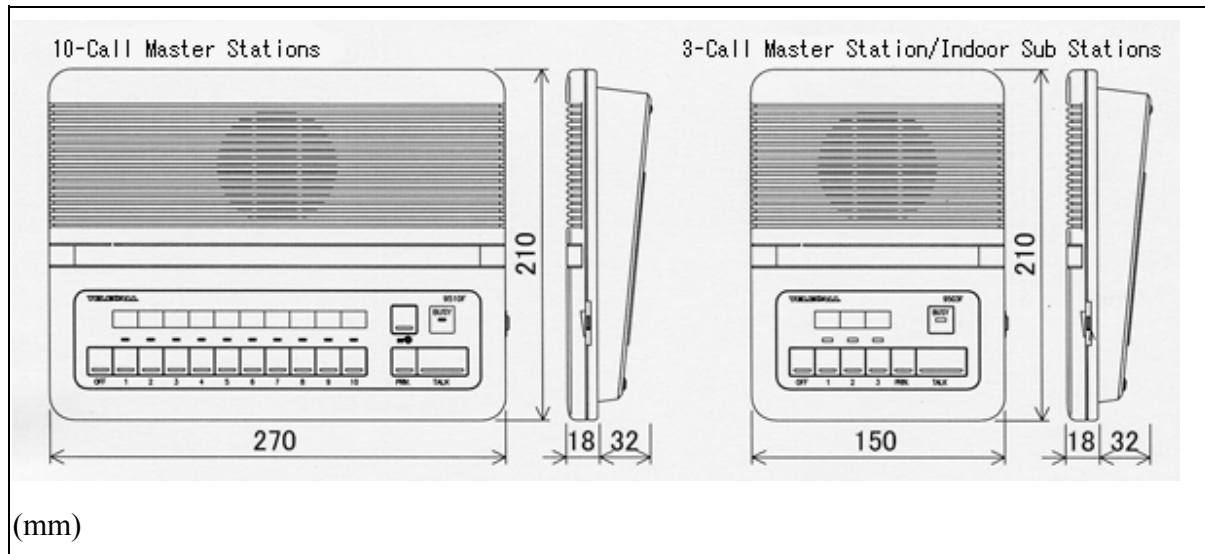

### Outdoor Sub Stations

All Telecall outdoor stations are weather resistant.

The 95-W and 95-WI are made of high impact ABS plastic, while 95-WS is a high quality stainless steel model.

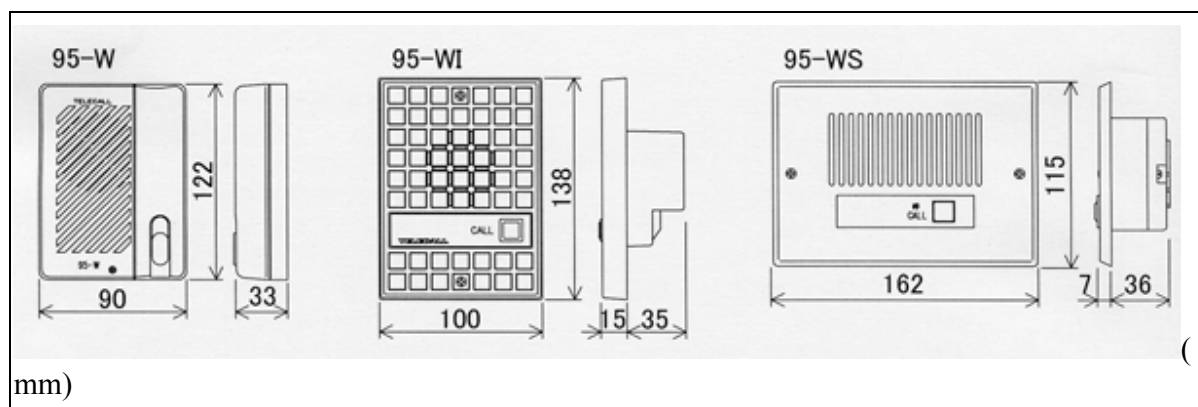

### ■ Master Stations

Specifications	
Type of installation	Surface, flush mount; desktop use
